# provation®

Provation® MD

Maximize efficiency with a solution that ensures your organisation's compliance with the Australian Colonoscopy Clinical Care Standard indicators.

Gastroenterology (GI) Procedure Documentation for Australian Clinicians and Health Service Organisations

Provation procedure documentation solutions are trusted by leading gastroenterologists worldwide. We design our software to enable providers to quickly, accurately and completely capture all relevant procedure details, which can be critical for colon cancer prevention and treatment.

Provation complies with the Australian Commission on Safety and Quality in Health Care.

To help ensure complete data capture for colonoscopy clinical care standard quality indicator compliance, the four indicators for safe and appropriate colonoscopies can be captured in Provation MD.

- **Clinical Indicator 1** - Proportion of patients scheduled for a colonoscopy whose bowel preparation was adequate
- **Clinical Indicator 2** - Proportion of patients undergoing a colonoscopy who have their entire colon examined
- **Clinical Indicator 3** - Proportion of patients who had a colonoscopy that detected one or more adenoma(s)
- **Clinical Indicator 4** - Proportion of patients who had a colonoscopy that detected one or more sessile serrated adenoma(s) or sessile serrated polyp(s)

Provation MD contains 25+ years of deep medical content for documenting over 35 GI procedures.

Features include:

- Structured, compliant and easily retrieved electronic notes for each documented procedure
- Instant and automatic preparation of Patient Letters, Referring Provider Letters, Post-Op Orders, Discharge Instructions, and more
- An Anticipatory Interface™ that guides clinicians through the documentation of entire procedures
- Interfacing with endoscopes and image capture equipment for photo documentation, as well as EMRs
- **And so much more!**
