

Provation® iProLite

Simplify Billing. Capture Quality Measures. Maximize Revenue.

Provation® iPro Lite empowers anesthesia teams to streamline billing and capture quality measures on a mobile device, allowing providers to refocus on patient care while optimizing their bottom line.

By automating traditionally manual processes, this easy-to-use tool ensures greater accuracy and efficiency while reducing the workload for clinicians and IT teams.

Error-Free Operations Start Here

Manual billing and quality metric capture can significantly impact your practice financial health and operational efficiency. Without an automated solution, you risk human errors, missed revenue opportunities, and CMS penalties.

Streamline Billing

Provation iPro Lite streamlines your billing process, ensuring accurate billing for all services, including modifiers and RVUs. This eliminates missed revenue opportunities, improves cash flow, reduces administrative burden, and creates a more efficient revenue cycle.

Capture Quality Measures

With a mobile-friendly design, Provation iPro Lite allows providers to capture anesthesia-specific MIPS data in real time with ease – with no additional resources. Choose which quality measures to collect, track critical events and adverse outcomes, and get peace of mind knowing your team is up to date with regulatory standards, reducing the risk of CMS penalties.
